

M.I.T. Logistics Park

Colon, Republic of Panama

MIT is a bustling port operation located in Panama that employs more than 800 workers that are highly rated in their efficiency and skill at general port services as well as loading and unloading containers.

McKinney Internacional is providing design and construction management of 3 industrial buildings of 135,000 SF each in the Manzanillo International Terminal (MIT). The buildings include structurally supported floor consisting of piles, ground beams, double tees and topping, pre-cast tilt-up panels (avoiding perimeter columns), and an internal steel structure. In addition, each building has mezzanine levels where administrative offices and related services will be located.

For this project, cutting-edge lighting controls, ESFR fire suppression, fire alarm, access control, closed circuit TV and seamless metal roof were implemented.

The design and construction management work included the pavement and utility design for each building's exterior area of 215,000 SF.
